DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4, 6-14, and 16-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 6, and 16, "wherein the beam has substantially the same intensity as the intensity of each of the laser beams" is not a clear description. Which beam is being described? Is the beam a different beam than the earlier described beam(s)?

The dependent claims contain the unclear language of the base claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3 and 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 4,820,899 to Hikima et al in view of US20040097103A1 to Imai et al in view of USPN 6,791,596 to Nihei et al.

Hikima et al show (Figure 6) plural lasers directed to plural stages in a semiconductor manufacturing system.

Imai et al show (Figure 9) plural laser beams input to a synthesizing optical system in an annealing device.

Nihei et al show (Figure 32) plural beams input to a synthesizer prism and plural beam output from the synthesizer prism.

The instant claimed system would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art in order to rapidly process plural workpieces with uniform energy.

Claims 4, 9-14, and 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 4,820,899 to Hikima et al in view of US20040097103A1 to Imai et al in view of USPN 6,791,596 to Nihei et al as applied to claims 1 and 6 above, and further in view of USPN 6,861,614 to Tanabe et al.

Tanabe et al show (Figure 52) a chamber with an optical unit and a stage therein and the use of a plurality of chambers having an optical unit and a stage therein with beam synthesizing and beam splitting system would have been obvious at the time

applicant's invention was made to a person having ordinary skill in the art because each chamber allows for some independent control and provides optimized work output.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art pertains to plural laser beams and to synthesized beams.
